Bespoke Luxury Wooden Windows, Doors,
Conservatories & Orangeries

OUR HISTORY

We began in 1988 as a manufacturer of high quality bespoke wooden conservatories, during almost 3 decades of development we have grown to become one of the most respected suppliers of wooden windows, doors, conservatories & orangeries in the UK.

OUR PRODUCTS

All of our products are manufactured in the UK using a range of the very latest high tech CNC machinery and our time honoured traditional methods. We also supply a range of our conservatories and orangeries to the export market, which is a testament to the quality of our work.

OUR RANGES

Whether you are looking for traditional or contemporary, we have a comprehensive product range to suit all tastes and style of properties. If you want to replicate an existing design, we have the ability to adapt our products to create a completely one off design bespoke to you.

SECURITY & PERFORMANCE

For your piece of mind, all of our flush & storm casement windows & all of our entrance doors are fitted with comprehensive locking systems that are approved by secured by design. We have a long standing relationship with our paint supplier, Teknos. The Teknos micro porous paint system is highly tested and widely seen across the whole industry as one of the best systems available to use on timber windows & doors. As such we can offer an 8 year guarantee on opaque paint finishes.

ENVIRONMENTAL QUALITIES

All of our standard product range is manufactured from FSC approved timbers harvested from manageable forests. We are committed to doing our utmost to help the environment, and wooden windows manufactured from sustainably sourced timbers are the most environmentally friendly choice for new windows in your home. We go one step further by recycling all of the saw dust created in the manufacturing process which is turned into fuel to heat people's homes in the form of briquettes.

Stormproof Casment
Green Ground |24mm Glazing | Leaded Glass | Finished in Two Colours

PENKRIDGE STORMPROOF CASEMENT WINDOWS

KEY FEATURES

Our Penkridge Stormproof Lipped Casement Window is our most popular and versatile window. Equally at home on both traditional & contemporary properties.

As with all our windows and doors, our storm casements are designed to take 24mm glazing units, which is the most efficient double glazing thickness, however other options are available upon request. Where planning regulations may dictate different requirements, the rebate sizes can be changed to accommodate any depth of glazing down to 4mm single glazing.

The opening sashes lock with a secure by design approved espagnolette locking system and are double sealed with Deventer rubber draft seals, one fixed to the opening sash and the other fixed to the frame. We use Deventer rubber draft seals across our whole range.

Our windows & doors can be finished in a range of paint finishes to suit your requirements. We have a selection of standard colours to help inspire your choice, or alternatively we can match to any RAL colour. It is also possible to fully customise your windows and doors with different colours for sashes and frames, or have the outside finished to a different colour to the inside.

Our stormproof lipped windows can be customized with internal moulding options and a choice of Georgian bar options. We offer a range of handles available in a choice of colours and finishes. We have handpicked all of the hardware options, selected for their quality and usability. If you are looking for something different then we will always try to accommodate your choice where possible.

HATHERTON FLUSH CASEMENT WINDOWS

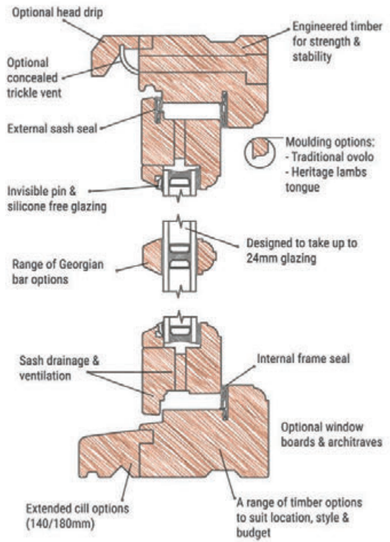

The Hatherton flush casement window is ideal for projects where a flush fitting sash is required. It uses the same secured by design espagnolette locking system and double Deventer draft seals as seen in our Penkridge range. As with all our windows & doors, our flush casement is designed to take 24mm glazing units, which is the most efficient double glazing thickness.

Where planning regulations may dictate different requirements, the rebate sizes can be changed to accommodate any depth of glazing down to 4mm single glazing, making this a versatile window, which is also suitable for conservation areas.

Our flush casement window is set into a 95mm thick frame that is double rebated for enhanced performance and to conceal hinge and locking mechanisms. The window comes as standard with friction hinges but can also be specified with working traditional butt hinges and peg stays for an authentic and traditional feel.

As with all our window range, the Hatherton Flush Casement is compatible with a choice of Georgian bar options, a choice of internal mouldings and a range of handpicked hardware options.

KEY FEATURES

Flush Casement
Grandis Oak |24mm Glazing

Sash Casment
Pure White |14mm Glazing | 18mm Georgian Bars | Polished Chrome Hardware

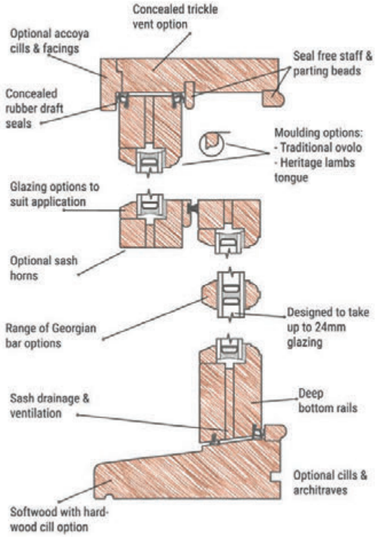

BROCTON SLIDING SASH CASEMENT WINDOWS

Our Brocton Sliding Sash windows are manufactured with our state of the art CNC machinery to guarantee perfectly square and accurate components. This ensures the smooth and effortless operation of our Sliding Sash Windows.

Available in cords and weights or spring balances they are double sealed using a specially designed Deventer draft seal located in the sash that is concealed when the window is in the closed position. These seals are made from high grade TPE (thermos-plastic elastomer) for maximum longevity as well as sealing and insulation values. This results in an authentic and traditional look whilst incorporating modern technology and energy efficiency.

We have a full range of glazing options from 4mm single to 24mm insulated glass units, choices of sash horns and modern or traditional ironmongery in a range of finishes. Additional items include trickle ventilation, child safety restrictors, tilt action and a range of pre-finished internal architraves in your chosen colour for a perfect match.

KEY FEATURES

ENTRANCE DOORS

TRADITIONAL RANGE

Our traditional range features a 58mm thick door leaf set into a 95mm frame, draft sealed with rubber Deventer seals. As standard our opaque finished doors are manufactured from accoya timber for dimensional stability. This ensures that your door will operate smoothly all year round whilst at the same time enjoying all of the other benefits that accoya timber offers. You can choose to personalise your door with almost any option of hardware available.

We offer different of options on the locking mechanism to suit you properties needs, they are:

- Night latch Multipoint lock which gives all of the features of having a night latch lock with separate dead latch but is multipoint locking and all operated from one key, approved by secure by design – Our most popular locking system for front doors.
- Lever/Lever Multipoint Lock – Modern locking system, also available with a split spindle.
- Traditional Night latch with separate dead lock.

CONTEMPORARY RANGE

Our contemporary range of entrance doors are striking in not only their design but in some of their features. Our range starts with a 68mm thick door leaf which has a thermally insulated core and is steel reinforced for security and strength. We also offer a 98mm thick leaf which is suitable for Passivhaus. The whole range is covered by our 10 year warpage guarantee, even when made in Oak timber.

These doors look great with a large stainless-steel pull handle of which there is a comprehensive range to choose from. As standard we fit our night latch multipoint lock which is approved by secured by design.

We have a standard range of designs which are shown here, however we can recreate almost any design that you can think of.

Make a statement with a real timber door,
We have a range of traditional or contemporary designs

FLUSH FRENCH DOORS

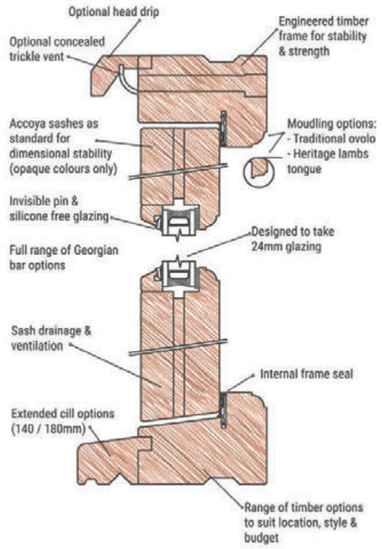

Our Flush French Doors are set into a 95mm frame with a 58mm door leaf designed to take up to 24mm glazing. As standard our Flush French doors are fitted with an interlocking multi-point locking system. The slave door is operated by a concealed lever which is only visible once the master door is opened. This means we don't have a need for a 2nd door handle on the slave door giving a truly elegant look.

Our preferred timber for all of our door sashes is Accoya, known for its exceptional dimensional stability meaning you'll never have a sticky door again. All year round the door will operate without any fuss. For our doors that are designed with a deeper bottom rail or mid rails, we make them from one solid piece of timber rather than the cheaper way of machining two smaller sections and then gluing them together.

All of our French doors are available as opening in or opening out and can be made with side lights and top lights. Choose from full glass, flat or raised and fielded moulded panels to match your style and our selection of internal moulding options.

Take a look at our lipped stormproof French door options over on the next page.

KEY FEATURES

As standard our Flush French doors are fitted with an interlocking multi-point locking system.

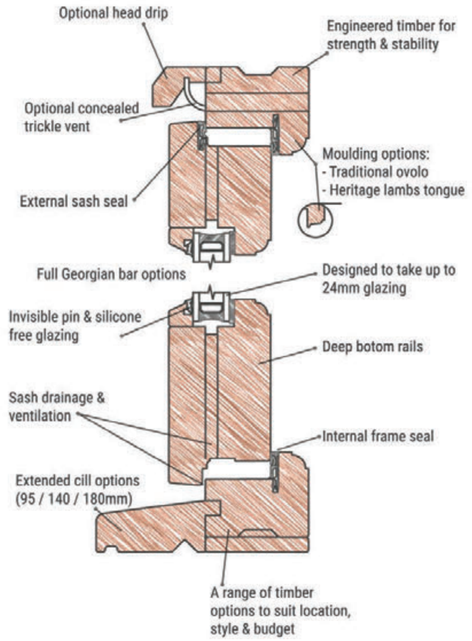

LIPPED STORMPROOF FRENCH DOORS

This modern interpretation of a French Door where the door leaf itself wraps around the frame allowing for extra draft sealing and weatherproofing.

Our Lipped stormproof French Doors incorporate high security espagnolette locking systems and fully adjustable 3D hinges. They can be produced with any number of sidelights or top lights to suit the room or design you have in mind. As with all of our doors you can choose from our range of internal moulding options.

Our Lipped stormproof door is designed to take up to 24mm double glazing and has handle operated locking to both the master and slave leafs on double door designs.

Our full range of threshold options for all our doors are available to view on our website.

Our lipped stormproof French Doors incorporate high security espagnolette locking systems

DOORS

BI-FOLDING DOORS

Bi-Fold doors offer versatility. They allow you to bring the outside in and can really create the wow factor. They are equally at home on traditional and modern properties. We manufacture all our opaque finished bi-folding door sashes from Accoya timber for dimensional stability. The advantage of this cannot be overstated. With accoya timber there is virtually no movement and you will get smooth operation all year round.

Our Bi-Fold Doors come with a range of threshold options that include timber, aluminium and Hollodeen stone effect - an option to suit every application. After extensive research with many bi-fold door gearing manufacturers, we have found that Brio Bi-Fold Ironmongery to be the best on the market. As such all of our bi-fold doors are constructed with Brio Ironmongery. Further benefits and information are available to view on our website. The ironmongery is available as standard in Satin and Polished Chrome with brass and black options available as an upgrade.

DOORS

As standard our Flush French doors are fitted with an interlocking multi-point locking system.

ORANGERIES

Timber is the perfect material to make the most beautiful Orangeries. Others try to imitate the natural beauty of wood, but with materials such as UPVC and aluminium it isn't possible to recreate the same highly detailed moulds and often the structures are left looking cumbersome and unattractive.

An Orangery differs to a conservatory by its design and construction. Typically, this means a roof with a smaller glazed lantern surrounded by a flat roof perimeter. Our Orangeries have been designed using the same traditional methods of architecture dating back to the 17th century when they were first introduced into the UK.

Over recent years Orangeries have become an ever more popular choice. They are a wonderful addition to a home giving a very versatile living space. Our Orangeries usually feature stunning wide corner posts and entablature fascia mouldings, but they can be designed to suit and compliment almost any style of property.

Often our customers ask us to incorporate sliding folding doors to their timber Orangery which allow the room to be opened up to the garden, giving a lovely entertaining space or a peaceful relaxing room with fresh air.

ORANGERIES

Timber is the perfect material to make the most beautiful Orangeries.

CONSERVATORIES

As with our Orangeries, all of our Conservatories are manufactured using the finest timber materials along with our many years of knowledge and experience to give you a product that not only looks good but one that will stand the test of time. We use the latest CNC machinery to accurately produce many of the components that ensures a perfect fit when the conservatory arrives to your property.

There are a wide variety of styles of Conservatories from a simple lean-to through to elaborate Victorian and Edwardian designs. We recommend designing the conservatory to incorporate original design features of the house, use existing fenestration details so the finished product complements and looks part of the original house rather than something that was an add on.

From swimming pool enclosures to shaped arches, let your imagination go to make the most of any given space and produce something truly unique that will be admired by all.

Whatever your specific requirements we have the knowledge to make your ideas come to life.

Conservatories are manufactured using the finest timber materials along with our many years of experience.
